

# Info-Link SiriusXM Programming Guide

1. Go to URL [www.infolinksirius.com](http://www.infolinksirius.com) and use your user ID and password to log into the programming web site.

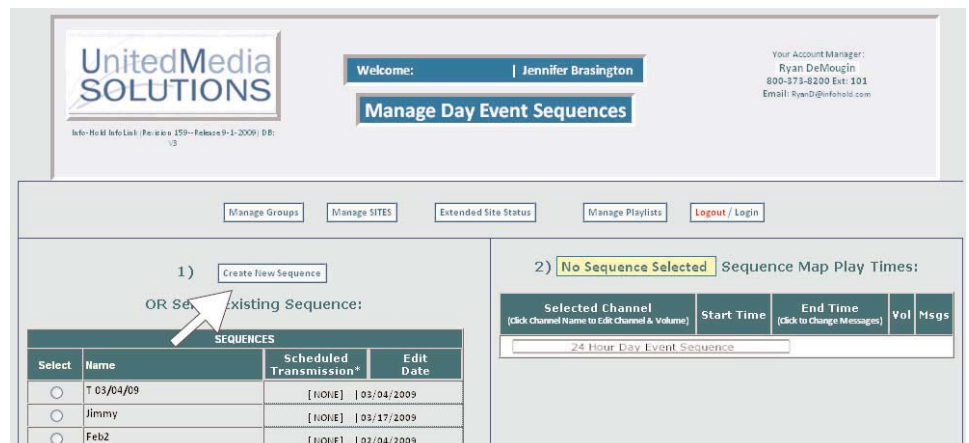

If you have not registered, enter your Link Account Number in both the Account Number and Password locations and click on Register.

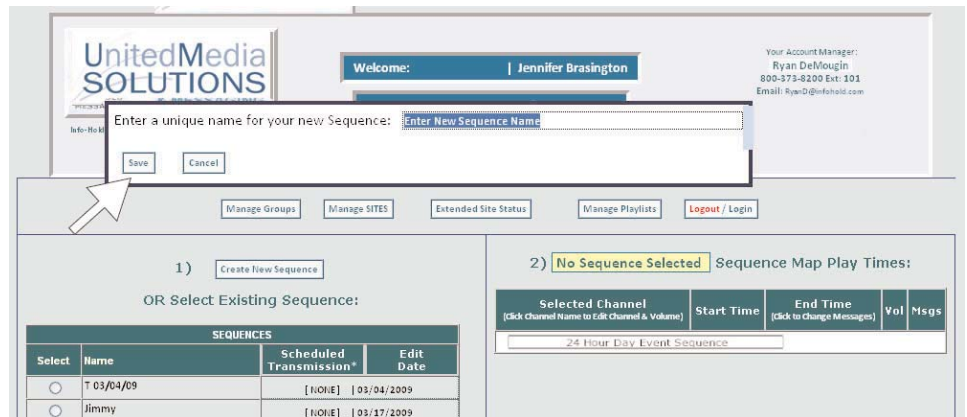

2. Choose to schedule your SiriusXM Radio Channels or your on-hold messages. For the purpose of this guide, we will schedule SiriusXM Channels first.

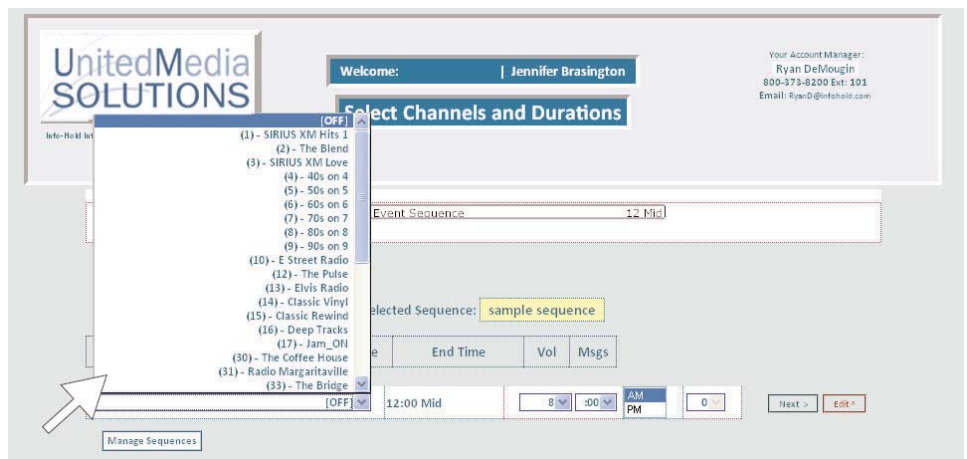

3. To schedule a new SiriusXM playlist, click on "Create New Sequence."

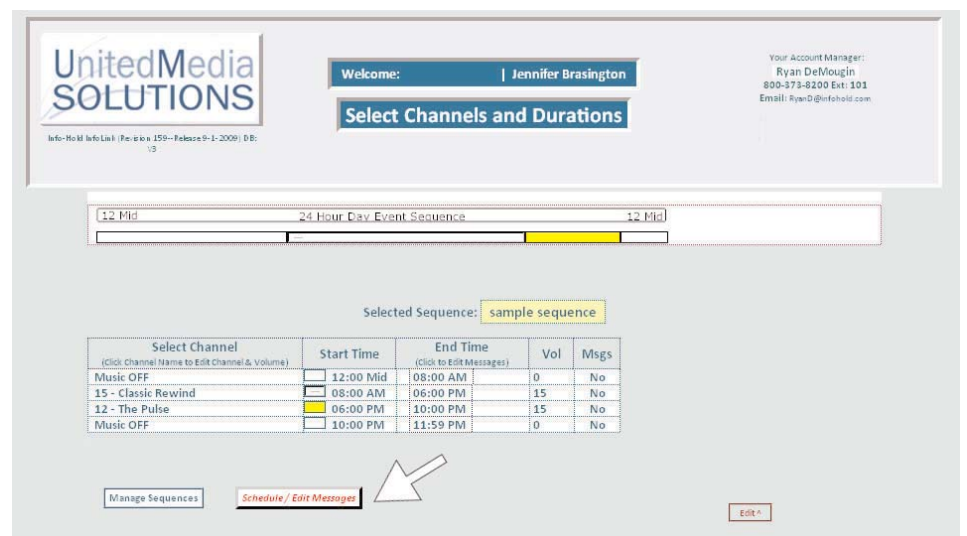

4. You will be prompted to give your new sequence a name.

5. From here you will choose the SiriusXM channels you would like to play, along with the times they will play. We suggest you set the volume to 20 so that you can always decrease the volume remotely in case someone on-site sets it too high.

6. This is an example of how a finished 24-hour sequence will look. When you are satisfied with your selection, you are ready to schedule your overhead messages. Click "Schedule/Edit Messages."

7. Choose the segment of overhead music where you would like to schedule messages, and choose from the pull down list how often you would like a message to play. For this demonstration, we will choose every 15 minutes.

Click on the Schedule Messages button.

Time Block	Message Interval	Volume	Msgs
<input type="checkbox"/> Music OFF--12:00 Mid - 08:00 AM	15	0	No
<input type="checkbox"/> 15 - Classic Rewind--08:00 AM - 06:00 PM	15	15	No
<input checked="" type="checkbox"/> 12 - The Pulse--06:00 PM - 10:00 PM	15	15	No
<input type="checkbox"/> Music OFF--10:00 PM - 11:59 PM	15	0	No

8. You may choose to schedule your messages individually, or set up a recurring list to run throughout your segment. We will choose a recurring list for this demonstration.

Your list of available overhead messages will appear in the box. Simply click on the message you would like and then click Add To List.

9. Once you have chosen your message list, you are free to change the order, add or delete messages until you are satisfied with your list. At this point, click on Schedule List.

10. Your messages will be automatically scheduled to run in the order you selected, one every 15 minutes throughout the time segment allotted.

Click Done Save Selections to return to the music schedule list. You may now enter the messages to play during the rest of your music segments.

Select Scheduling Method
